LAACH

Test Booklet Code

This Booklet contains 24 pages.

Do not open this Test Booklet until you are asked to do so.

Read carefully the Instructions on the Back Cover of this Test Booklet.

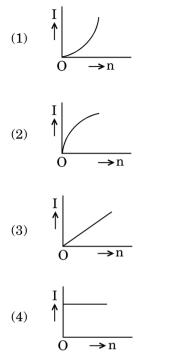

Important Instructions :

- 1. The Answer Sheet is inside this Test Booklet. When you are directed to open the Test Booklet, take out the Answer Sheet and fill in the particulars on **Side-1** and **Side-2** carefully with **blue/black** ball point pen only.
- 2. The test is of **3 hours** duration and this Test Booklet contains **180** questions. Each question carries **4** marks. For each correct response, the candidate will get **4** marks. For each incorrect response, **one mark** will be deducted from the total scores. The maximum marks are 720.
- 3. Use Blue/Black Ball Point Pen only for writing particulars on this page/marking responses.
- 4. Rough work is to be done on the space provided for this purpose in the Test Booklet only.
- 5. On completion of the test, the candidate must hand over the Answer Sheet to the Invigilator before leaving the Room/Hall. The candidates are allowed to take away this Test Booklet with them.
- 6. The CODE for this Booklet is **SS**. Make sure that the CODE printed on **Side-2** of the Answer Sheet is the same as that on this Test Booklet. In case of discrepancy, the candidate should immediately report the matter to the Invigilator for replacement of both the Test Booklet and the Answer Sheet.
- 7. The candidates should ensure that the Answer Sheet is not folded. Do not make any stray marks on the Answer Sheet. Do not write your Roll No. anywhere else except in the specified space in the Test Booklet/Answer Sheet.
- 8. Use of white fluid for correction is *not* permissible on the Answer Sheet.

Name of the Candidate (in Capitals) :							
Roll Number : in figures							
: in words							
Candidate's Signature :	Invigilator's Signature :						
Facsimile signature stamp of Centre Superintendent :

 A battery consists of a variable number 'n' of identical cells (having internal resistance 'r' each) which are connected in series. The terminals of the battery are short-circuited and the current I is measured. Which of the graphs shows the correct relationship between I and n?

- 2. A set of 'n' equal resistors, of value 'R' each, are connected in series to a battery of emf 'E' and internal resistance 'R'. The current drawn is I. Now, the 'n' resistors are connected in parallel to the same battery. Then the current drawn from battery becomes 10 I. The value of 'n' is
 - (1) 9
 - (2) 20
 - (3) 11
 - (4) 10
- 3. A carbon resistor of $(47 \pm 4.7) \text{ k}\Omega$ is to be marked with rings of different colours for its identification. The colour code sequence will be
 - (1) Green Orange Violet Gold
 - $(2) \quad Yellow-\ Green-Violet-Gold$
 - (3) Yellow Violet Orange Silver
 - (4) Violet Yellow Orange Silver

The kinetic energies of a planet in an elliptical orbit about the Sun, at positions A, B and C are K_A , K_B and K_C , respectively. AC is the major axis and SB is perpendicular to AC at the position of the Sun S as shown in the figure. Then

- 5. If the mass of the Sun were ten times smaller and the universal gravitational constant were ten times larger in magnitude, which of the following is *not* correct?
 - (1) 'g' on the Earth will not change.
 - (2) Time period of a simple pendulum on the Earth would decrease.
 - (3) Walking on the ground would become more difficult.
 - (4) Raindrops will fall faster.
 - A solid sphere is in rolling motion. In rolling motion a body possesses translational kinetic energy (K_t) as well as rotational kinetic energy (K_r) simultaneously. The ratio $K_t : (K_t + K_r)$ for the sphere is
 - (1) 2:5

6.

- (2) 10:7
- (3) 5:7
- $(4) \quad 7:10$
- 7. A solid sphere is rotating freely about its symmetry axis in free space. The radius of the sphere is increased keeping its mass same. Which of the following physical quantities would remain constant for the sphere ?
 - (1) Angular momentum
 - (2) Rotational kinetic energy
 - (3) Moment of inertia
 - (4) Angular velocity

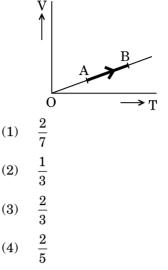

- 8. An astronomical refracting telescope will have large angular magnification and high angular resolution, when it has an objective lens of
 - (1) small focal length and small diameter
 - (2) large focal length and large diameter
 - (3) large focal length and small diameter
 - (4) small focal length and large diameter
- 9. Unpolarised light is incident from air on a plane surface of a material of refractive index 'µ'. At a particular angle of incidence 'i', it is found that the reflected and refracted rays are perpendicular to each other. Which of the following options is correct for this situation ?

(1)
$$i = \tan^{-1}\left(\frac{1}{\mu}\right)$$

(2) $i = \sin^{-1}\left(\frac{1}{\mu}\right)$

- (3) Reflected light is polarised with its electric vector perpendicular to the plane of incidence
- (4) Reflected light is polarised with its electric vector parallel to the plane of incidence
- 10. In Young's double slit experiment the separation d between the slits is 2 mm, the wavelength λ of the light used is 5896 Å and distance D between the screen and slits is 100 cm. It is found that the angular width of the fringes is 0.20°. To increase the fringe angular width to 0.21° (with same λ and D) the separation between the slits needs to be changed to
 - $(1) \quad 1{\cdot}7 \ mm$
 - (2) $2 \cdot 1 \text{ mm}$
 - $(3) \quad 1{\cdot}9 \ mm$
 - (4) 1·8 mm

The volume (V) of a monatomic gas varies with its temperature (T), as shown in the graph. The ratio of work done by the gas, to the heat absorbed by it, when it undergoes a change from state A to state B, is

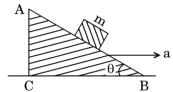

12. The fundamental frequency in an open organ pipe is equal to the third harmonic of a closed organ pipe. If the length of the closed organ pipe is 20 cm, the length of the open organ pipe is

- (1) 16 cm
- (2) 12.5 cm
- (3) 8 cm
- $(4) \quad 13{\cdot}2\ cm$
- **13.** The efficiency of an ideal heat engine working between the freezing point and boiling point of water, is
 - (1) 12.5%
 - (2) 6.25%
 - (3) 20%
 - (4) 26.8%
 - **4.** At what temperature will the rms speed of oxygen molecules become just sufficient for escaping from the Earth's atmosphere ? (Given :

Mass of oxygen molecule (m) = 2.76×10^{-26} kg Boltzmann's constant k_B = 1.38×10^{-23} J K⁻¹)

- $(1) \quad 1{\cdot}254 \times 10^4 \ \mathrm{K}$
- (2) $5.016 \times 10^4 \text{ K}$
- (3) $8.360 \times 10^4 \text{ K}$
- (4) $2.508 \times 10^4 \text{ K}$

- 15. A toy car with charge q moves on a frictionless horizontal plane surface under the influence of a uniform electric field E . Due to the force q E, its velocity increases from 0 to 6 m/s in one second duration. At that instant the direction of the field is reversed. The car continues to move for two more seconds under the influence of this field. The average velocity and the average speed of the toy car between 0 to 3 seconds are respectively
 - (1) 1.5 m/s, 3 m/s
 - (2) 1 m/s, 3.5 m/s
 - (3) 1 m/s, 3 m/s
 - (4) 2 m/s, 4 m/s
- 16. A block of mass m is placed on a smooth inclined wedge ABC of inclination θ as shown in the figure. The wedge is given an acceleration 'a' towards the right. The relation between a and θ for the block to remain stationary on the wedge is

- (1) $a = g \tan \theta$
- (2) $a = g \cos \theta$
- (3) $a = \frac{g}{\sin \theta}$

(4)
$$a = \frac{g}{\operatorname{cosec} \theta}$$

- 17. A student measured the diameter of a small steel ball using a screw gauge of least count 0.001 cm. The main scale reading is 5 mm and zero of circular scale division coincides with 25 divisions above the reference level. If screw gauge has a zero error of -0.004 cm, the correct diameter of the ball is
 - (1) 0.529 cm
 - (2) 0.053 cm
 - (3) 0.525 cm
 - (4) 0.521 cm
- 18. The moment of the force, $\vec{F} = 4\hat{i} + 5\hat{j} 6\hat{k}$ at (2, 0, -3), about the point (2, -2, -2), is given by

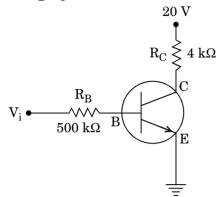

(1)	-7i -4j -8k
(2)	$-7\hat{i}$ $-8\hat{j}$ $-4\hat{k}$
(3)	$-4\hat{i}-\hat{j}-8\hat{k}$
(4)	$-8\hat{i} - 4\hat{j} - 7\hat{k}$

- An em wave is propagating in a medium with a velocity V = V î. The instantaneous oscillating electric field of this em wave is along +y axis.
 Then the direction of oscillating magnetic field of the em wave will be along
 - (1) x direction
 - (2) y direction
 - (3) + z direction
 - (4) z direction
- 20. The magnetic potential energy stored in a certain inductor is 25 mJ, when the current in the inductor is 60 mA. This inductor is of inductance
 - (1) 13.89 H
 - $(2) \quad 1.389 \ H$
 - (3) 138.88 H
 - $(4) \quad 0{\cdot}138 \; H$
- 21. An object is placed at a distance of 40 cm from a concave mirror of focal length 15 cm. If the object is displaced through a distance of 20 cm towards the mirror, the displacement of the image will be
 - (1) 36 cm towards the mirror
 - (2) 30 cm towards the mirror
 - (3) 36 cm away from the mirror
 - (4) 30 cm away from the mirror
- 22. The refractive index of the material of a prism is $\sqrt{2}$ and the angle of the prism is 30°. One of the two refracting surfaces of the prism is made a mirror inwards, by silver coating. A beam of monochromatic light entering the prism from the other face will retrace its path (after reflection from the silvered surface) if its angle of incidence on the prism is
 - (1) zero
 - (2) **30°**
 - (3) 45°
 - (4) **60°**

23. In the circuit shown in the figure, the input voltage V_i is 20 V, $V_{BE} = 0$ and $V_{CE} = 0$. The values of I_B , I_C and β are given by

- (1) $I_B = 40 \ \mu A, \ I_C = 5 \ mA, \ \beta = 125$
- (2) $I_B = 20 \ \mu A, \ I_C = 5 \ mA, \ \beta = 250$
- (3) $I_B = 25 \mu A$, $I_C = 5 mA$, $\beta = 200$
- (4) $I_B = 40 \ \mu A$, $I_C = 10 \ mA$, $\beta = 250$
- **24.** In a p-n junction diode, change in temperature due to heating

 - (2) does not affect resistance of p-n junction
 - (3) affects only forward resistance
 - (4) affects only reverse resistance
- **25.** In the combination of the following gates the output Y can be written in terms of inputs A and B as

- $(1) \quad \mathbf{A} + \mathbf{B}$
- (2) $\overline{\mathbf{A} \cdot \mathbf{B}} + \mathbf{A} \cdot \mathbf{B}$
- (3) A. \overline{B} + \overline{A} . B
- (4) $\overline{\mathbf{A} \cdot \mathbf{B}}$

The power radiated by a black body is P and it radiates maximum energy at wavelength, λ_0 . If the temperature of the black body is now changed so that it radiates maximum energy at wavelength $\frac{3}{4}\lambda_0$, the power radiated by it becomes nP. The value of n is

(1)
$$\frac{81}{256}$$

(2) $\frac{256}{81}$
(3) $\frac{4}{3}$
(4) $\frac{3}{4}$

- 27. Two wires are made of the same material and have the same volume. The first wire has cross-sectional area A and the second wire has cross-sectional area 3A. If the length of the first wire is increased by Δl on applying a force F, how much force is needed to stretch the second wire by the same amount ?
 - (1) F
 - (2) 4 F
 - (3) 6 F
 - (4) 9 F
- 28. A sample of 0.1 g of water at 100°C and normal pressure $(1.013 \times 10^5 \text{ Nm}^{-2})$ requires 54 cal of heat energy to convert to steam at 100°C. If the volume of the steam produced is 167.1 cc, the change in internal energy of the sample, is
 - (1) 84.5 J
 - (2) 42·2 J
 - (3) 208.7 J
 - $(4) ~~ 104{\cdot}3~J$
- **29.** A small sphere of radius 'r' falls from rest in a viscous liquid. As a result, heat is produced due to viscous force. The rate of production of heat when the sphere attains its terminal velocity, is proportional to
 - (1) r^4
 - (2) r^5
 - $(3) r^2$
 - (3) r^{3} (4) r^{3}

- 30. A metallic rod of mass per unit length 0.5 kg m⁻¹ is lying horizontally on a smooth inclined plane which makes an angle of 30° with the horizontal. The rod is not allowed to slide down by flowing a current through it when a magnetic field of induction 0.25 T is acting on it in the vertical direction. The current flowing in the rod to keep it stationary is
 - $(1) \quad 11{\cdot}32 \; A$
 - (2) 14.76 A
 - $(3) \quad 5{\cdot}98 \ A$
 - (4) 7·14 A
- 31. An inductor 20 mH, a capacitor 100 μ F and a resistor 50 Ω are connected in series across a source of emf, V = 10 sin 314 t. The power loss in the circuit is
 - $(1) \ \ 1{\cdot}13 \ W$
 - $(2) \quad 2{\cdot}74 \ W$
 - $(3) \quad 0.43 \text{ W}$
 - $(4) \quad 0.79 \ W$
- 32. A thin diamagnetic rod is placed vertically between the poles of an electromagnet. When the current in the electromagnet is switched on, then the diamagnetic rod is pushed up, out of the horizontal magnetic field. Hence the rod gains gravitational potential energy. The work required to do this comes from
 - (1) the induced electric field due to the changing magnetic field
 - (2) the lattice structure of the material of the rod
 - (3) the magnetic field
 - (4) the current source
- 33. Current sensitivity of a moving coil galvanometer is 5 div/mA and its voltage sensitivity (angular deflection per unit voltage applied) is 20 div/V. The resistance of the galvanometer is
 - $(1) \quad 500 \ \Omega$
 - (2) 250 Ω
 - (3) 25 Ω
 - (4) 40 Ω

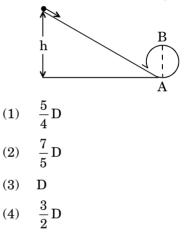

- A tuning fork is used to produce resonance in a glass tube. The length of the air column in this tube can be adjusted by a variable piston. At room temperature of 27°C two successive resonances are produced at 20 cm and 73 cm of column length. If the frequency of the tuning fork is 320 Hz, the velocity of sound in air at 27°C is
 - (1) 300 m/s
 - (2) 350 m/s
 - (3) 339 m/s
 - (4) 330 m/s
- **35.** The electrostatic force between the metal plates of an isolated parallel plate capacitor C having a charge Q and area A, is
 - (1) inversely proportional to the distance between the plates.
 - (2) proportional to the square root of the distance between the plates.
 - (3) linearly proportional to the distance between the plates.
 - (4) independent of the distance between the plates.
 - A pendulum is hung from the roof of a sufficiently high building and is moving freely to and fro like a simple harmonic oscillator. The acceleration of the bob of the pendulum is 20 m/s^2 at a distance of 5 m from the mean position. The time period of oscillation is
 - (1) 1 s
 - (2) 2 s
 - (3) πs
 - $(4) \quad 2\pi \; s$
- **37.** An electron falls from rest through a vertical distance h in a uniform and vertically upward directed electric field E. The direction of electric field is now reversed, keeping its magnitude the same. A proton is allowed to fall from rest in it through the same vertical distance h. The time of fall of the electron, in comparison to the time of fall of the proton is
 - (1) equal
 - (2) 10 times greater
 - (3) 5 times greater
 - (4) smaller

- **38.** An electron of mass m with an initial velocity $\overrightarrow{V} = V_0 \hat{i} (V_0 > 0)$ enters an electric field $\overrightarrow{E} = -E_0 \hat{i} (E_0 = \text{constant} > 0)$ at t = 0. If λ_0 is its de-Broglie wavelength initially, then its de-Broglie wavelength at time t is
 - $(1) \quad \lambda_0$
 - $(2) \quad \lambda_0 \, t$
 - $(3) \quad \lambda_0 \left(1 + \frac{eE_0}{mV_0} t \right)$ $(4) \quad \frac{\lambda_0}{\left(1 + \frac{eE_0}{mV_0} t \right)}$
- **39.** The ratio of kinetic energy to the total energy of an electron in a Bohr orbit of the hydrogen atom, is
 - (1) 1:-2
 - $(2) \quad 2:-1$
 - (3) 1:-1
 - (4) 1:1
- 40. When the light of frequency 2v₀ (where v₀ is threshold frequency), is incident on a metal plate, the maximum velocity of electrons emitted is v₁. When the frequency of the incident radiation is increased to 5v₀, the maximum velocity of electrons emitted from the same plate is v₂. The ratio of v₁ to v₂ is
 - (1) 2:1
 - (2) 4:1
 - (3) 1:4
 - (4) 1:2
- **41.** For a radioactive material, half-life is 10 minutes. If initially there are 600 number of nuclei, the time taken (in minutes) for the disintegration of 450 nuclei is
 - (1) 15
 - (2) 30
 - (3) 10
 - (4) 20

- Three objects, A : (a solid sphere), B : (a thin circular disk) and C : (a circular ring), each have the same mass M and radius R. They all spin with the same angular speed ω about their own symmetry axes. The amounts of work (W) required to bring them to rest, would satisfy the relation
 - (1) $W_A > W_C > W_B$

42.

- $(2) \quad \mathbf{W}_{\mathrm{B}} > \mathbf{W}_{\mathrm{A}} > \mathbf{W}_{\mathrm{C}}$
- $(3) \quad \mathrm{W}_\mathrm{A} > \mathrm{W}_\mathrm{B} > \mathrm{W}_\mathrm{C}$
- $(4) \quad W_{\rm C} > W_{\rm B} > W_{\rm A}$
- **43.** A body initially at rest and sliding along a frictionless track from a height h (as shown in the figure) just completes a vertical circle of diameter AB = D. The height h is equal to

44. Which one of the following statements is *incorrect* ?

- (1) Coefficient of sliding friction has dimensions of length.
- $(2) \quad \mbox{Frictional force opposes the relative motion}.$
- (3) Limiting value of static friction is directly proportional to normal reaction.
- (4) Rolling friction is smaller than sliding friction.
- **45.** A moving block having mass m, collides with another stationary block having mass 4m. The lighter block comes to rest after collision. When the initial velocity of the lighter block is v, then the value of coefficient of restitution (e) will be
 - (1) **0**·4
 - (2) 0.8
 - (3) 0.25
 - (4) 0.5

128.	The stage during which separation of the paired	136.	On which of the following properties does the
	homologous chromosomes begins is		coagulating power of an ion depend ?
	(1) Zygotene		(1) The sign of charge on the ion alone
	(2) Diakinesis		(2) Both magnitude and sign of the charge on
	(3) Diplotene		the ion
	(4) Pachytene		(3) Size of the ion alone
129.	The Golgi complex participates in		(4) The magnitude of the charge on the ion
	(1) Activation of amino acid	10-	alone
	(2) Respiration in bacteria	137.	The solubility of $BaSO_4$ in water is
	(3) Formation of secretory vesicles		2.42×10^{-3} gL ⁻¹ at 298 K. The value of its
	(4) Fatty acid breakdown		solubility product (K _{sp}) will be
130.	Stomatal movement is <i>not</i> affected by		(Given molar mass of $BaSO_4 = 233 \text{ g mol}^{-1}$)
	(1) CO_2 concentration		(1) $1.08 \times 10^{-8} \text{ mol}^2 \text{ L}^{-2}$
	(2) O_2 concentration		
	(3) Light		(2) $1.08 \times 10^{-14} \text{ mol}^2 \text{ L}^{-2}$
	(4) Temperature		(3) $1.08 \times 10^{-12} \text{ mol}^2 \text{ L}^{-2}$
131.	The two functional groups characteristic of sugars are		(4) $1.08 \times 10^{-10} \text{ mol}^2 \text{ L}^{-2}$
	(1) carbonyl and hydroxyl	190	Circus and due Washe constant for NUL II. O
	(2) carbonyl and phosphate	138.	Given van der Waals constant for NH_3 , H_2 , O_2 and CO_2 are respectively 4.17, 0.244, 1.26 and
	(3) carbonyl and methyl		and CO_2 are respectively 4.17, 0.244, 1.36 and 3.59, which one of the following gases is most
	(4) hydroxyl and methyl		easily liquefied ?
132.			(1) CO ₂
1020	reaction of photosynthesis ?		-
	(1) Oxygen		$(2) O_2$
	(2) NADPH		(3) H ₂
	(3) NADH		(4) NH ₃
	(4) ATP	120	Following solutions were prepared by mixing
133.	Stomata in grass leaf are	100.	different volumes of NaOH and HCl of different
	(1) Barrel shaped		concentrations :
	(2) Rectangular		a. 60 mL $\frac{M}{10}$ HCl + 40 mL $\frac{M}{10}$ NaOH
	(3) Kidney shaped		a. $60 \text{ mL} \frac{10}{10} \text{ HCl} + 40 \text{ mL} \frac{10}{10} \text{ NaOH}$
	(4) Dumb-bell shaped		b. 55 mL $\frac{M}{10}$ HCl + 45 mL $\frac{M}{10}$ NaOH
134.	Which of the following is true for nucleolus ?		10 10 10 10
	(1) It is a site for active ribosomal RNA synthesis.		c. 75 mL $\frac{M}{5}$ HCl + 25 mL $\frac{M}{5}$ NaOH
	(2) It takes part in spindle formation.		M M
	(3) It is a membrane-bound structure.		d. 100 mL $\frac{M}{10}$ HCl + 100 mL $\frac{M}{10}$ NaOH
	(4) Larger nucleoli are present in dividing cells.		pH of which one of them will be equal to 1?
135.			(1) c
	(1) Oscillatoria		(2) d
	(2) Nostoc		(3) a
	(3) Mycobacterium		(4) b
	(4) Saccharomyces		

140. Which one of the following elements is unable to 146. The compound A on treatment with Na gives B, form MF_6^{3-} ion ?

- (1)In
- (2)В
- (3)Al
- (4)Ga
- 141. Which of the following statements is *not* true for halogens?
 - (1)Chlorine has the highest electron-gain enthalpy.
 - All but fluorine show positive oxidation (2)states.
 - (3)All are oxidizing agents.
 - (4)All form monobasic oxyacids.
- **142.** In the structure of ClF_3 , the number of lone pairs of electrons on central atom 'Cl' is
 - (1)three
 - (2)four
 - (3)two
 - (4)one
- 143. Considering Ellingham diagram, which of the following metals can be used to reduce alumina?
 - (1)Cu
 - (2)Mg
 - (3)Zn
 - (4)Fe
- 144. The correct order of N-compounds in its decreasing order of oxidation states is
 - (1)NH₄Cl, N₂, NO, HNO₃
 - (2)HNO₃, NH₄Cl, NO, N₂
 - HNO₃, NO, NH₄Cl, N₂ (3)
 - (4)HNO₃, NO, N₂, NH₄Cl
- 145. The correct order of atomic radii in group 13 elements is
 - (1) B < Ga < Al < In < Tl
 - B < Ga < Al < Tl < In(2)
 - B < Al < Ga < In < Tl(3)
 - (4)B < Al < In < Ga < Tl

- and with PCl₅ gives C. B and C react together to give diethyl ether. A, B and C are in the order
 - C₂H₅OH, C₂H₅ONa, C₂H₅Cl (1)
 - (2)C₂H₅Cl, C₂H₆, C₂H₅OH
 - C₂H₅OH, C₂H₅Cl, C₂H₅ONa (3)
 - C₂H₅OH, C₂H₆, C₂H₅Cl (4)
- **147.** Hydrocarbon (A) reacts with bromine by substitution to form an alkyl bromide which by Wurtz reaction is converted to gaseous hydrocarbon containing less than four carbon atoms. (A) is
 - (1)CH₄
 - (2) $CH_3 - CH_3$
 - (3) $CH_2 = CH_2$
 - $CH \equiv CH$ (4)
- 148. The compound C_7H_8 undergoes the following reactions :

$$\mathrm{C_7H_8} \xrightarrow{3 \ \mathrm{Cl}_2 \, / \, \Delta} \mathrm{A} \xrightarrow{\mathrm{Br}_2 \, / \, \mathrm{Fe}} \mathrm{B} \xrightarrow{\mathrm{Zn} \, / \, \mathrm{HCl}} \mathrm{C}$$

The product 'C' is

- (1)*p*-bromotoluene
- (2)3-bromo-2,4,6-trichlorotoluene
- (3)o-bromotoluene
- (4)*m*-bromotoluene
- 149. Which oxide of nitrogen is not a common pollutant introduced into the atmosphere both due to natural and human activity?
 - (1)NO
 - (2) N_2O
 - (3) NO_{2}
 - (4) N_2O_5

150	The a	t	of isom		have be the complete

	(4)	16	5	2		167.		ation of aniline in strong acidic medium also			
162.	Which one of the following conditions will favour maximum formation of the product in the reaction,							s m-nitroaniline because In acidic (strong) medium aniline is present			
							(1)	as anilinium ion.			
	$A_2(g) + B_2(g) \rightleftharpoons X_2(g) \Delta_r H = -X \text{ kJ }?$						(2)	In absence of substituents nitro group			
	(1)	_	perature				15	always goes to m-position.			
	(2) High temperature and high pressure						(3)	In electrophilic substitution reactions amino group is meta directive.			
	(3)	Low tem	perature a	and low p	oressure		(4)	In spite of substituents nitro group always			

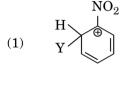

(4) In spite of substituents nitro group always goes to only m-position.

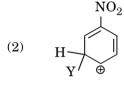

Low temperature and high pressure

(4)

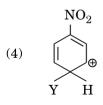

168. Which of the following molecules represents the order of hybridisation sp², sp², sp, sp from left to right atoms ?

- (1) $CH_3 CH = CH CH_3$
- (2) $CH_2 = CH CH = CH_2$
- (3) $CH_2 = CH C \equiv CH$
- (4) $HC \equiv C C \equiv CH$
- **169.** Which of the following carbocations is expected to be most stable ?

170. Which of the following is correct with respect toI effect of the substituents ? (R = alkyl)

- (1) $-NR_2 > -OR > -F$
- (2) $-NH_2 > -OR > -F$
- (3) $-NR_2 < -OR < -F$
- (4) $-NH_2 < -OR < -F$

- 171. Magnesium reacts with an element (X) to form an ionic compound. If the ground state electronic configuration of (X) is 1s² 2s² 2p³, the simplest formula for this compound is
 - $(1) Mg_3X_2$
 - (2) Mg₂X
 - (3) MgX₂
 - $(4) Mg_2X_3$
- **172.** Iron exhibits bcc structure at room temperature. Above 900°C, it transforms to fcc structure. The ratio of density of iron at room temperature to that at 900°C (assuming molar mass and atomic radii of iron remains constant with temperature) is

(1)
$$\frac{1}{2}$$

(2)
$$\frac{3\sqrt{3}}{4\sqrt{2}}$$

(3)
$$\frac{4\sqrt{3}}{3\sqrt{2}}$$

(4)
$$\frac{\sqrt{3}}{\sqrt{2}}$$

173. Which one is a *wrong* statement?

- (1) The value of m for d_{z^2} is zero.
- $(2) \quad \ \ {\rm The \ electronic \ configuration \ of \ N \ atom \ is}$

$1s^2$	$2s^2$	$2p_x^1 \ 2p_y^1 \ 2p_z^1$				
↑↓	^↓	1	1	↓		

- (3) An orbital is designated by three quantum numbers while an electron in an atom is designated by four quantum numbers.
- (4) Total orbital angular momentum of electron in 's' orbital is equal to zero.
- **174.** Consider the following species :

 CN^+ , CN^- , NO and CN

Which one of these will have the highest bond order?

- (1) CN
- (2) CN⁺
- (3) CN⁻
- (4) NO

LAACH/SS/Page 20 Downloade@4fefre.com

175. Identify the major products P, Q and R in the following sequence of reactions :

- **176.** Which of the following compounds can form a zwitterion ?
 - (1) Glycine
 - (2) Benzoic acid
 - (3) Acetanilide
 - (4) Aniline

- **177.** The correct difference between first- and second-order reactions is that
 - (1) the rate of a first-order reaction does depend on reactant concentrations; the rate of a second-order reaction does not depend on reactant concentrations
 - (2) a first-order reaction can be catalyzed; a second-order reaction cannot be catalyzed
 - (3) the half-life of a first-order reaction does not depend on $[A]_0$; the half-life of a second-order reaction does depend on $[A]_0$
 - (4) the rate of a first-order reaction does not depend on reactant concentrations; the rate of a second-order reaction does depend on reactant concentrations
- **178.** Among CaH_2 , BeH_2 , BaH_2 , the order of ionic character is
 - (1) $BaH_2 < BeH_2 < CaH_2$
 - $(2) \quad \mathrm{BeH}_2 < \mathrm{BaH}_2 < \mathrm{CaH}_2$
 - $(3) \quad \mathrm{CaH}_2 < \mathrm{BeH}_2 < \mathrm{BaH}_2$
 - (4) $BeH_2 < CaH_2 < BaH_2$
- **179.** Consider the change in oxidation state of Bromine corresponding to different emf values as shown in the diagram below :

Then the species undergoing disproportionation is

- (1) HBrO
- (2) Br₂
- (3) BrO⁻₄
- (4) BrO_3^-
- **180.** In which case is the number of molecules of water maximum ?
 - (1) 10^{-3} mol of water
 - (2) 0.00224 L of water vapours at 1 atm and 273 K
 - $(3) \quad 0{\cdot}18 \ g \ of \ water$
 - (4) 18 mL of water

SPACE FOR ROUGH WORK

Read carefully the following instructions :

- 1. Each candidate must show on demand his/her Admit Card to the Invigilator.
- 2. No candidate, without special permission of the Superintendent or Invigilator, would leave his/her seat.
- 3. The candidates should not leave the Examination Hall without handing over their Answer Sheet to the Invigilator on duty and sign the Attendance Sheet twice. **Cases where a** candidate has not signed the Attendance Sheet second time will be deemed not to have handed over the Answer Sheet and dealt with as an unfair means case.
- 4. Use of Electronic/Manual Calculator is prohibited.
- 5. The candidates are governed by all Rules and Regulations of the examination with regard to their conduct in the Examination Hall. All cases of unfair means will be dealt with as per Rules and Regulations of this examination.
- 6. No part of the Test Booklet and Answer Sheet shall be detached under any circumstances.
- 7. The candidates will write the Correct Test Booklet Code as given in the Test Booklet/Answer Sheet in the Attendance Sheet.
